WhatNext Vision Motors: Shaping the Future of Mobility with Innovation and Excellence

USE CASE :

WhatsNext Vision Motors is revolutionizing its customer experience and operational efficiency with a cutting-edge Salesforce CRM implementation. The project streamlines the vehicle ordering process by auto-assigning orders to the nearest dealer based on customer location and preventing orders for out-of-stock vehicles. Automated workflows update order statuses dynamically and send scheduled email reminders for test drives. Key technical implementations include Apex triggers for stock validation, batch jobs for stock updates, and scheduled Apex for automated order processing. This initiative enhances customer satisfaction, improves order accuracy, and boosts overall operational efficiency.

USER SCENARIO :

WhatsNext Vision Motors, a pioneering force in the automotive industry, is dedicated to transforming the mobility sector with innovative technology and solutions that prioritize customer needs. The company has embarked on an ambitious Salesforce project with the core objective of enhancing the customer experience and streamlining its operational processes.

At the heart of this project is the improvement of the customer ordering process. The system is designed to automatically suggest the nearest dealer location to customers based on their address. This feature is intended to significantly enhance the convenience and efficiency of the ordering experience, making it more customer-friendly and reducing the time and effort required from the customer's end.

The project also addresses a common issue in the automotive industry: stock availability. The system includes a mechanism that prevents customers from placing orders for vehicles that are out of stock. This proactive approach ensures that customers can only create orders for vehicles that are currently available, thus avoiding potential confusion and disappointment that may arise from stock unavailability. This feature not only enhances customer satisfaction but also improves the accuracy of the company's order fulfillment process.

Furthermore, the project incorporates a scheduled process for updating the status of bulk order records. This automated process is designed to update the order status based on stock availability. If a vehicle is out of stock at the time of order placement, the system will update the order status to 'Pending.' On the other hand, if the vehicle is in stock, the system will update the status to 'Confirmed.' This ensures that all orders are accurately reflected in terms of their fulfillment status, providing clear and transparent communication to customers regarding the status of their orders.

The implementation of this Salesforce project at WhatsNext Vision Motors is expected to yield several benefits. It aims to create a more efficient ordering system that reduces the potential for errors and improves the overall service provided to customers. By streamlining the ordering process and ensuring accurate stock availability, the company can enhance customer satisfaction and loyalty.

Moreover, the project is expected to contribute to operational efficiency by reducing the administrative burden on staff. By automating certain processes, employees can focus on more strategic tasks that require human intervention and expertise. This not only improves the overall productivity of the company but also allows for a more agile response to market demands and customer needs.

Requirements :

Salesforce CRM Implementation

Store and manage vehicle details, stock availability, and dealer information in Salesforce.

Track customer orders, test drives, and service requests efficiently.

Automate workflows to assign orders to the nearest dealer based on customer location.

Process Automation

Prevent order placement if the vehicle is out of stock.

Auto-assign orders to the nearest dealer based on the customer's location.

Send automated email reminders for scheduled test drives.

3. Apex and Trigger

Implement Apex triggers to enforce business rules such as stock validation and automatic dealer assignment.

Use trigger handlers to follow best practices and ensure modularity and maintainability.

4. Batch Jobs

Develop a batch Apex job to periodically check vehicle stock levels and update availability.

Send scheduled email notifications for stock replenishment and order processing.

What you'll learn :

Data Modelling

Fields and Relationships

Lightning App Builder
Record Triggered Flows
Apex and Apex Triggers
Batch Apex
Scheduled Apex

Salesforce Credential Creation:

Creating Developer Account

Creating a developer org in salesforce.

Go to <https://developer.salesforce.com/signup>

On the sign up form, enter the following details :

First name & Last name

Email

Role : Developer

Company : College Name

County : India

Postal Code : pin code

Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in the format :

username@organization.com

Click on sign me up after filling these.

Account Activation

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.
2. Click on Verify Account
3. Give a password and answer a security question and click on change password.
4. Then you will redirect to your salesforce setup page.

Data Management-Objects

Objects & Relationships

Object Name	Purpose	Relationships
Vehicle__c	Stores vehicle details	Related to Dealer & Orders
Vehicle_Dealer__c	Stores authorized dealer info	Related to Orders
Vehicle_Customer__c	Stores customer details	Related to Orders & Test Drives
Vehicle_Order__c	Tracks vehicle purchases	Related to Customer & Vehicle
Vehicle_Test_Drive__c	Tracks test drive bookings	Related to Customer & Vehicle
Vehicle_Service_Request__c	Tracks vehicle servicing requests	Related to Customer & Vehicle

Create Vehicle Object

The purpose of creating a Vehicle custom object is to have a clear picture of the vehicle details.

To create an object:

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

Enter the label name→ Vehicle

Plural label name→ Vehicles

Enter Record Name Label and Format

Record Name → Vehicle Name

Data Type → Text

Click on Allow reports,

Allow search → Save.

Custom Object Information

The singular and plural labels are used in tabs, page layouts, and reports.
Be careful when changing the name or label as it may affect existing integrations and merge templates.

Label

Vehicle

Example: Account

Plural Label

Vehicles

Example: Accounts

Starts with vowel sound

☐

The Object Name is used when referencing the object via the API.

Object Name

Vehicle

Example: Account

Description

Stores vehicle details and stock status.

Context-Sensitive Help Setting [Open the standard Salesforce.com Help & Training window](#)

Vehicle

Context-Sensitive Help Setting

☒ Open the standard Salesforce.com Help & Training window

☐ Open a window using a Visualforce page

Content Name

--None--

Enter Record Name Label and Format

The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.

Record Name

Vehicle Name

Example: Account Name

Data Type

Text

Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.

Optional Features

☒ Allow Reports

☐ Allow Activities

☐ Track Field History

☐ Allow in Chatter Groups

☐ Enable Licensing

Object Classification

When these settings are enabled, this object is classified as an Enterprise Application object. When these settings are disabled, this object is classified as a Light Application object. [Learn more.](#)

☒ Allow Sharing

By following the same steps we must create all the other objects listed or required for the project. Their datatype must be correct.

Data Management-Tabs :

Creating a Custom Tab(Vehicle)

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)

2. Select Object(Vehicle) → Select any tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) keep it as default → Save.

The screenshot shows the Salesforce Setup interface. The left sidebar contains navigation links for Setup Home, Salesforce Go, Service Cloud Reports, Commerce Setup Assistant, Hyperforce Assistant, Release Updates, Salesforce Mobile App, Lightning Usage, AgentExchange Offers, Sales Cloud Everywhere, ADMINISTRATION, Users, Data, and Email. The main content area is titled 'Custom Tabs' and includes a 'Quick Find' search bar. Below the title, there is a section for 'Custom Object Tabs' with a table listing various tabs and their styles. The table has columns for Action, Label, Tab Style, and Description. The tabs listed are Vehicle Customers, Vehicle Dealers, Vehicle Orders, Vehicles, Vehicle Service Requests, and Vehicle Test Drives. The tab styles shown are Hands, Prescriber, Airplane, Motorcycle, Train, and Ship. There is also a 'Web Tabs' section at the bottom.

Action	Label	Tab Style	Description
Edit Del	Vehicle Customers	Hands	
Edit Del	Vehicle Dealers	Prescriber	
Edit Del	Vehicle Orders	Airplane	
Edit Del	Vehicles	Motorcycle	
Edit Del	Vehicle Service Requests	Train	
Edit Del	Vehicle Test Drives	Ship	

Custom tabs must be created for all the objects using the above steps. Tab style must be chosen.

Data Management-App Manager

Create Lightning App

To create a lightning app page:

Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

The screenshot shows the Salesforce Setup interface with the 'Lightning Experience App Manager' page. The left sidebar shows the 'App Manager' link under the 'Apps' section. The main content area displays a list of 32 items, sorted by App Name. The table has columns for App Name, Developer Name, Description, Last Modified Date, App Type, and Visible In. The table lists various apps including Agentforce Grid, Agentforce Studio, All Tabs, Analytics Studio, App Launcher, Approvals, Automation, Bolt Solutions, Community, Content, and Data Cloud.

App Name	Developer Name	Description	Last Modified Date	App Type	Visible In
1 Agentforce Grid	AIWorkbench	Access Agentforce Grid	9/21/2026, 6:24 PM	Lightning	✓
2 Agentforce Studio	AgentforceStudio	Agentforce Studio	9/21/2026, 6:24 PM	Lightning	✓
3 All Tabs	AllTabSet		9/21/2026, 6:18 PM	Classic	✓
4 Analytics Studio	Insights	Build CRM Analytics dashboards and apps	9/21/2026, 6:18 PM	Classic	✓
5 App Launcher	AppLauncher	App Launcher tabs	9/21/2026, 6:18 PM	Classic	✓
6 Approvals	Approvals	Manage approvals and approval flows	9/21/2026, 6:18 PM	Lightning	✓
7 Automation	FlowsApp	Automate business processes and repetitive tasks.	9/21/2026, 6:24 PM	Lightning	✓
8 Bolt Solutions	LightningBolt	Discover and manage business solutions designed for your industry.	9/21/2026, 6:18 PM	Lightning	✓
9 Community	Community	Salesforce CRM Communities	9/21/2026, 6:18 PM	Classic	✓
10 Content	Content	Salesforce CRM Content	9/21/2026, 6:18 PM	Classic	✓
11 Data Cloud	Audience360	Build a thorough and complete understanding of your customers.	9/21/2026, 6:18 PM	Lightning	✓

Data Management-Fields

Order_Date__c (Date)

Status__c (Picklist: Pending, Confirmed, Delivered, Canceled)

4. Vehicle_Customer__c (Custom Object)

Customer_Name__c (Text)

Email__c (Email)

Phone__c (Phone)

Address__c (Text)

Preferred_Vehicle_Type__c (Picklist: Sedan, SUV, EV, etc.)

5. Vehicle_Test_Drive__c (Custom Object)

Customer__c (Lookup to Customer__c)

Vehicle__c (Lookup to Vehicle__c)

Test_Drive_Date__c (Date)

Status__c (Picklist: Scheduled, Completed, Canceled)

6. Vehicle_Service_Request__c (Custom Object)

Customer__c (Lookup to Customer__c)

Vehicle__c (Lookup to Vehicle__c)

Service_Date__c (Date)

Issue_Description__c (Text)

Status__c (Picklist: Requested, In Progress, Completed)

Creating a Field in Vehicle Object

3. Go to setup → click on Object Manager → type object name(Vehicle) in quick find bar→ click on the object.
4. Now click on “Fields & Relationships” → New
5. Select Data type as “PickList”.
6. Click on Next

Fill the above as following:

Field Label: Vehicle Model

Fill PickList Values

Click on Next → Next → Save and new.

The screenshot displays the Salesforce Setup interface for the 'Vehicle' object. The left sidebar contains navigation links such as 'Setup Home', 'Salesforce Go', 'Service Cloud Reports', 'Commerce Setup Assistant', 'Hyperforce Assistant', 'Release Updates', 'Salesforce Mobile App', 'Lightning Usage', 'AgentExchange Offers', 'Sales Cloud Everywhere', 'ADMINISTRATION' (with sub-links for Users, Data, and Email), and 'PLATFORM TOOLS' (with a link for Subscription Management). The main content area is titled 'SETUP > OBJECT MANAGER Vehicle' and shows the 'Fields & Relationships' section. A table lists 9 items, sorted by Field Label:

Field Label	Field Name	Data Type	Required
Created By	CreatedById	Lookup(User)	
Dealer	Dealer__c	Lookup(Vehicle Dealer)	✓
Last Modified By	LastModifiedById	Lookup(User)	
Owner	OwnerId	Lookup(User, Group)	✓

Automation

Flow Creation

Creating a record triggered flow to assign nearest dealer to the customer's location

Step 1 : In Quick Find, type Flows and click on Flows. Click New Flow.

Step 2 : Select Start From Scratch and click Next.

Step 3 : Select Record-Triggered Flow and click Create

Step 4 : Select Vehicle Order Object

Trigger the Flow When : Select Record is Created.

Set Entry Condition :

All Conditions Are Met (AND)

Filed : Status__c

Operator : Equals

Value : Pending

Step 5 : Click + → Select **Get Records**

Step 6 : **Label** : Get Customer Information

Object : Vehicle Customer

Condition :

Field : Id

Operator : Equals

Value : {!\$Record.Vehicle_Customer__c}

Step 7 : Click + → Select **Get Records**

Label : Get Nearest Dealer

Object : Vehicle Dealer

Condition :

Field : Dealer_Location__c

Operator : Equals

Value : {!Get_Customer_Information.Address__c}

Step 8 : Click + → Select **Update Records**

Label : Assign Dealer to Order

*How to Find Records to Update and Set Their Values : Use the IDs and all field values from a record or record collection

Select Record(s) to Update : {!Get_Nearest_Dealer}

Step 9 : Click Save and Give label Name and Activate Flow.

Label Name : Auto Assign Dealer

Step 10 : Activate Flow

Record-Trigger Flow Creation

Creating record triggered flow to send an email to the customer reminding about the test drive.

Step 1 : Select Record-Triggered Flow and click Create

Step 2 : Select Vehicle Test Drive Object

Trigger the Flow When : A record is created or updated

Set Entry Condition :

All Conditions Are Met (AND)

Filed : Status__c

Operator : Equals

Value : Scheduled

Step 3 : Click + Add Scheduled Paths (below the trigger).

Label: Reminder Before Test Drive.

Time Source: Test_Drive_Date__c

Offset Number: 1.

Offset Options: Days Before.

Click Done.

Step 4 :

Click + Add Element → Get Records.

Label: Get Customer Information.

Object: Vehicle_Customer__c.

Filter Conditions: Id = {!\$Record.Customer__c}.

How Many Records to Store: Select Only the first record.

How to Store Record Data: Choose Automatically store all fields.

Step 5: Send Reminder Email

Click + Add Element → Action.

Action Type: Send Email

Label: Send Test Drive Reminder.

Subject: "Reminder: Your Test Drive is Tomorrow!".

Recipient Address List : {!Get_Customer_[Information.Email](#)__c}

Rich-Text-Formatted Body : True

Body : Create Variable

8 . Api Name : EmailSent

Step 6 : Click save

Label Name : Test Drive Reminder

Step 7 : Activate Flow

Flow Page After Creation :

Test your Flow :

Apex and Batch Class

Create Apex and Trigger Batch Jobs :

Step 1 : Click Developer Console From Gear icon

Step 2 : click File then Select New then Select Apex.

Step 3 : Give Name For Apex Class

Class Name : VehicleOrderTriggerhandler

Step 4 : Write Apex Code

Source Code :

```
public class VehicleOrderTriggerHandler {  
  
    public static void handleTrigger(List<Vehicle_Order__c> newOrders, Map<Id,

Step 5 : Write Trigger Handler

Step 6 : Write Trigger Class Name and Select Vehicle Order Object

Step 7 : Call Apex Class in Trigger Class

Source Code:

```
trigger VehicleOrderTrigger on Vehicle__Order__c (before insert,before update, after insert, after update) {  
  
    VehicleOrderTriggerHandler.handleTrigger(Trigger.new, Trigger.oldMap,  
    Trigger.isBefore,Trigger.isAfter, Trigger.isInsert, Trigger.isUpdate);  
  
}
```

Step 8 : Create Batch Job

A customer places an order, but the vehicle is out of stock.

The order remains pending.

After new stock is added, the batch job updates the order to confirmed.

Source Code:

```
global class VehicleOrderBatch implements Database.Batchable<sObject> {  
  
    global Database.QueryLocator start (Database.BatchableContext bc) {  
  
        return Database.getQueryLocator([  
  
        SELECT Id, Status__c, Vehicle___c  
  
        FROM Vehicle__Order___c  
  
        WHERE Status__c  
  
        'Pending'  
  
        ]);  
  
    }  
  
    global void execute(Database.BatchableContext bc, List<Vehicle__Order__c> orderList) {  
  
        Set<Id> vehicleIds = new Set<Id>();  
  
        for (Vehicle__Order__c order orderList) {
```

```

if (order.Vehicle__c != null) {
    vehicleIds.add(order.Vehicle__c);
}
}

if (!vehicleIds.isEmpty()) {
    Map<Id, Vehicle__c> vehicleStockMap = new Map<Id, Vehicle__c>();

    for (Vehicle__c vehicle: [SELECT Id, Stock Quantity__c FROM Vehicle__c WHERE Id IN
    vehicleIds]) {
        vehicleStockMap.put(vehicle.Id, vehicle);
    }

    List<Vehicle_Order__c> ordersToUpdate = new List<Vehicle_Order__c>(); List<Vehicle__c>
    vehiclesToUpdate = new List<Vehicle__c>();

    for (Vehicle_Order__c order orderList) {
        if (vehicleStockMap.containsKey(order.Vehicle__c)) {
            Vehicle__c vehicle = vehicleStockMap.get(order.Vehicle__c);

            if (vehicle.Stock_Quantity__c > 0) {
                order.Status__c = 'Confirmed';
                vehicle.Stock_Quantity__c -= 1;
                ordersToUpdate.add(order);
                vehiclesToUpdate.add(vehicle);
            }
        }
    }

    if (!ordersToUpdate.isEmpty()) {
        update ordersToUpdate;
    }

    if (!vehiclesToUpdate.isEmpty()) {
        update vehiclesToUpdate;
    }
}

```

```

    }
}

global void finish(Database.BatchableContext bc) {
    System.debug('Vehicle order batch job completed.');
```

Step 9 : Create Schedule Class then revoked Batch Class in Schedule Class

Source Code :

```

global class VehicleOrderBatchScheduler implements Schedulable {
    global void execute(SchedulableContext sc) {
        VehicleOrderBatch batchJob = new VehicleOrderBatch();
        Database.executeBatch(batchJob, 50); // 50 is the batch size
    }
}
```

Step 10 : Schedule the Batch Job To run the batch job every **night at midnight** :

Source Code :

```

String cronExp = '0 0 12 * * ?'; // Runs daily at 12:00 PM

System.schedule('Daily Vehicle Order Processing', cronExp, new
VehicleOrderBatchScheduler());
```

Step 11 : You Can Check where this Schedule Job is Running
